Atlassian
SOLUTIONS

SPEED UP YOUR BUSINESS

Atlassian solutions are a group of applications which support every step of the project. From the very beginning of the project, through the stages of planning, performance and implementation these tools enable you to plan, monitor the work on the project, and to successfully collaborate. And we enable the implementation of these solutions into your project.

## TOOLS FOR PROJECT MANAGEMENT

JIRA is a tool for monitoring the work on the project around which all the work in a project team is being done. With this tool you can monitor the work on the projects from the beginning to the end. It ensures that your each project is finished in a given period and with given resources. Features: monitoring the project activities, bugs and problems, analysis, code integration...

JIRA AGILE (GreenHopper) is a tool which adds to your team a component of agile project management for every JIRA project. JIRA Agile is perfect for creative methods of planning (Scrum) and monitoring progress (Kanban/Lean). Features such as monitoring tasks and time, diagrams and reporting make this tool desirable for each team working on agile methods.
JIRA CAPTURE (Bonfire) enables testers, developers and other members of your team quick and simple reporting on bugs within JIRA, directly from the application which is being tested. It enables a very simple check of the web application in all browsers, screenshots with notes and work testing with sessions.
COLLABORATIVE TOOLS

CONFLUENCE connects your team with the entire contents so the job can be done more quickly and efficiently. Join your entire business in one place, where everyone can create, share and discuss documents, ideas, JIRA tasks, projects and everything else.

TEAM CALENDARS is used to manage projects, plan events and assign work to individual team members, all in one place. You can get information at any moment which team member is working, which is on holidays and what the next important events are.

SHAREPOINT CONNECTOR enables you to connect Share-Point and Confluence easily and simply. Use all the advan-tages of a strong and quick contents creation, collaboration and document management and connection of these tools during work.

TOOLS FOR CODE DEVELOPMENT AND MONITORING

Atlassian SourceTree

SOURCE TREE is a powerful tool for MAC clients for Git and systems for the distributed control of versions. A great quality of Source Tree is the simplicity of usage.

Atlassian Crucible

CRUCIBLE. With Crucible tools, examine your code to improve its quality and reduce possible errors. It supports distributed teams, discussions between them and it reduces the need for meetings.

IDE Connector

ATLASSIAN IDE CONNECTOR manages problems, builds, code review and the source code by using Atlassian tools in your developmental environment. You can perform all actions with it in one place.

Atlassian FishEye

FISHEYE. Simple way of browsing, reporting and analyzing the source code in the tools for code monitoring (Subversion, Git, Mercurial and Perforce). It enables integration with JIRA tools so you can easily find all the historic data on the source code you are working on.

Atlassian Bitbucket

BITBUCKET offers unlimited, safe and free storage of the Git and Mercurial source code. Besides, it offers monitoring bugs, wiki and pull requests. It can be integrated with JIRA, Jenkins, Pivotal, Cloud9 IDE and other tools for developing software products.

Atlassian Clover

If you want to have metrics with which you can balance the effort invested in the source code and the code used for testing, then **CLOVER** is the right solution for you. Among other things it includes test optimization with which your tests will be performed more quickly and successfully.

Atlassian Bamboo

BAMBOO. Each server can run your test applications an unlimited number of times. Bamboo enables an automatic build, testing, deploy and issuing of your software. It can be integrated with JIRA and offers your team a complete cycle of issuing software workflow.
EXPANSIONS FOR ATLASSIAN SOLUTIONS

TEMPO PLUGIN

TEMPO. If you want a simple and yet efficient tool for monitoring time and planning, then Tempo can provide it. In combination with the JIRA tools, you can organize all your activities and receive precise reports on them in one place.

gliffy

GLIFFY is a popular tool for drawing various professional diagrams. Gliffy has rich library of icons / graphics which are industrial standard. This way your UML diagrams, network diagrams or flowcharts will look professional, understandable and usable.

JIRA GANTT-CHART

JIRA GANTT-CHART PROJECT. Expands the JIRA platform by adding key projects, and this primarily relates to the Gantt chart. Features: adjustable tables for problem display, the algorithm for the dynamic analysis of the first and last date as well the analysis of the critical path...

Atlassian Crowd

CROWD. Single sign-on tool. Your employees can be in different systems active directories, LDAP or Crowd. Crowd enables you to perform access control in one place, and they can be Atlassian applications, Subversion, Google Apps or even your applications.

If You are seeking for professional and expert advices on getting maximum of every Atlassian tool, then is our team perfect solution for You. We have experience and professionalism in installation, configuration, customization, and maintenance of all above applications. Besides, we offer services of expanding of Atlassian applications (JIRA, Confluence) by adding plugins like SharePoint, IDE connectors etc.
